

**AMENDMENTS**

***In The Claims:***

This listing of claims replaces all prior versions and listings of the claims. Please cancel claims 1-30. Please add claims 31-84. No new matter is added by these amendments.

1.-30. (Cancelled)

31. (New) A method comprising:

associating with an electronic message authorized by an originator identification data uniquely identifying said electronic message;

storing said identification data;

sending to an intended recipient said electronic message with said identification data;

receiving a confirmation request including said identification data;

comparing said identification data received in said confirmation request to said stored identification data; and

upon determining that said identification data received in said confirmation request matches said stored identification data, responding to said confirmation request, affirming said electronic message was authorized by the originator.

32. (New) The method of claim 31, wherein said electronic message includes one of an email, text message, VoIP message, or instant message.

33. (New) The method of claim 31, wherein said identification data is derived at least in part from information contained in one or more of a message header, a message text, and a timestamp, of said electronic message.

34. (New) The method of claim 31, wherein said identification data is included in a message header of said electronic message.
35. (New) The method of claim 31, wherein said identification data is included as an attachment to said electronic message.
36. (New) The method of claim 31, wherein said identification data is included in said message text.
37. (New) The method of claim 31, wherein said identification data includes a checksum for said message text.
38. (New) The method of claim 31, wherein said receiving a confirmation request includes receiving said confirmation request via port-to-port communication.
39. (New) The method of claim 31, wherein said receiving a confirmation request includes receiving a confirming electronic message.
40. (New) The method of claim 39, wherein said confirming electronic message includes one of an email, text message, VoIP message, or instant message.
41. (New) The method of claim 31, wherein said responding to said confirmation request includes responding via port-to-port communication.
42. (New) The method of claim 31, wherein said responding to said confirmation request includes responding with a return electronic message.

43. (New) The method of claim 42, wherein said return electronic message is one of an email, text message, VoIP message, or instant message.
44. (New) The method of claim 31, wherein said comparing is performed at a device different from a device at which said associating is performed.
45. (New) The method of claim 31, wherein said comparing is performed at a device different from a device at which said sending is performed.
46. (New) The system of claim 31, wherein said identification data is an alphanumeric string.
47. (New) A system comprising:  
a sending module operable to:  
    send to an intended recipient an electronic message authorized by an originator  
    and identification data uniquely identifying said electronic message, said  
    identification data being stored for subsequent access; and  
a confirming module operable to:  
    receive a confirmation request including said identification data;  
    compare said identification data received in said confirmation request to said  
    stored identification data; and  
    upon determining that said identification data received in said confirmation  
    request matches said stored identification data, respond to said  
    confirmation request, affirming said electronic message was authorized by  
    the originator.

48. (New) The system of claim 47, wherein said sending module is operable to send to the intended recipient an electronic message that includes one of an email, text message, VoIP message, or instant message.
49. (New) The system of claim 47, wherein said identification data was generated from information contained in one or more of a message header, a message text, and a timestamp, of said electronic message.
50. (New) The system of claim 47, wherein said identification data is an alphanumeric string.
51. (New) The system of claim 47, wherein said identification data is included in a message header of said electronic message.
52. (New) The system of claim 47, wherein said identification data is random.
53. (New) The system of claim 47, wherein said identification data is included in a message text of said electronic message.
54. (New) The system of claim 47, wherein said identification data is included as an attachment to said electronic message.
55. (New) The system of claim 47, wherein said identification data includes a checksum for said message text.
56. (New) The system of claim 47, wherein said confirmation module is operable to receive said confirmation request via port-to-port communication.

57. (New) The system of claim 47, wherein said confirmation module is operable to respond to said confirmation request via port-to-port communication.

58. (New) The system of claim 47, wherein said confirmation module is operable to receive said confirmation request as a confirming electronic message.

59. (New) The system of claim 58, wherein said confirming electronic message is one of an email, text message, VoIP message, or instant message.

60. (New) The system of claim 47, wherein said confirmation module is operable to respond to said confirmation request with a return electronic message.

61. (New) The system of claim 60, wherein said return electronic message is one of an email, text message, VoIP message, or instant message.

62. (New) A method comprising:

receiving a confirmation request to confirm that an electronic message sent to an intended recipient was authorized by an originator identified in the electronic message, the confirmation request including identification data purporting to uniquely identify the electronic message;

searching a data store for said identification data; and

upon determining that said data store does not contain said identification data, responding to said confirmation request, denying the electronic message was authorized by the originator.

63. (New) The method of claim 62, wherein said receiving a confirmation request includes receiving said confirmation request via port-to-port communication.

64. (New) The method of claim 62, wherein said responding to said confirmation request includes responding via port-to-port communication.

65. (New) The method of claim 62, wherein said receiving a confirmation request includes receiving a confirming electronic message.

66. (New) The method of claim 65, wherein said confirming electronic message is one of an email, text message, VoIP message, or instant message.

67. (New) The method of claim 62, wherein said responding to said confirmation request includes responding with a return electronic message.

68. (New) The method of claim 67, wherein said return electronic message is one of an email, text message, VoIP message, or instant message.

69. (New) A method comprising:

receiving a confirmation request to confirm that an electronic message sent to an intended recipient was authorized by an originator identified in the electronic message, the confirmation request including identification data purporting to uniquely identify the electronic message;

searching a data store for said identification data; and

upon determining that said data store contains said identification data, responding to said confirmation request, affirming the electronic message was authorized by the originator.

70. (New) The method of claim 69, wherein said receiving a confirmation request includes receiving said confirmation request via port-to-port communication.

71. (New) The method of claim 69, wherein said responding to said confirmation request includes responding via port-to-port communication.

72. (New) The method of claim 69, wherein said receiving a confirmation request includes receiving a confirming electronic message.

73. (New) The method of claim 72, wherein said confirming electronic message is one of an email, text message, VoIP message, or instant message.

74. (New) The method of claim 69, wherein said responding to said confirmation request includes responding with a return electronic message.

75. (New) The method of claim 74, wherein said return electronic message is one of an email, text message, VoIP message, or instant message.

76. (New) A method comprising:

receiving from a sending device a first electronic message authorized by an originator, said first electronic message containing information identifying the originator;

sending to a confirmation device a first confirmation request;

receiving a response to said first confirmation request affirming said first electronic message was authorized by the originator;

allowing said first electronic message to be further processed according to rules for processing of confirmed electronic messages directed to the intended recipient;

receiving from the sending device a second electronic message authorized by the originator, said second electronic message containing information identifying the originator; and

sending to the confirmation device a second confirmation request.

77. (New) The method of claim 76, wherein each of said first electronic message and said second electronic message includes one of an email, text message, VoIP message, or instant message.

78. (New) The method of claim 76, wherein said sending to a confirmation device includes sending said first confirmation request and said second confirmation request via port-to-port communication.

79. (New) The method of claim 76, wherein said receiving a response includes receiving the response via port-to-port communication.

80. (New) The method of claim 76, wherein said confirmation device is a different device than said sending device.

81. (New) The method of claim 76, wherein each of said first confirmation request and said second confirmation request is a confirming electronic message.

82. (New) The method of claim 81, wherein said confirming electronic message is one of an email, text message, VoIP message, or instant message.

83. (New) The method of claim 76, wherein said response to said first confirmation is a return electronic message.

84. (New) The method of claim 83, wherein said return electronic message is one of an email, text message, VoIP message, or instant message.
